Education

Guru Nanak Institutions Technical Campus - B.Tech

Computer Science - Data Science - 7.89 CGPA

Dec. 2020 – July 2024

Hyderabad, Telangana

Prathiba Junior Collage - Intermediate

MPC - 961 Marks

June. 2018 – March 2020

Mahabubnagar, Telangana

Dr.K.K.R Gowtham Concept School - High School

SSC - 9.7 GPA

June. 2017 – March 2018

Mahabubnagar, Telangana

Projects

Extracting Client Specified Data from Cloud based SQL Database | *Apache Spark, SQL Database* December 2023

- The goal of this project was to efficiently pull specific data requested by clients from a large SQL database hosted in the cloud, using Apache Spark.
- This helps the client access only the exact data they need without dealing with the entire database, making data retrieval faster and more manageable.

Incremental Data loading and Change Data Capture with ADF | *Azure Data Factory*

April 2024

- This Project focuses on implementing Incremental Data Loading and Change Data Capture using Azure Data Factory. It involves extracting and transforming data from various sources, capturing only the new changes to optimize storage.
- The Project leverages Azure SQL, Azure SQL Database, Azure Data Lake and Azure Pipelines, ensuring efficient data integration and minimizing latency in real-time analytics.

Disease Prediction | *Machine Learning*

March 2023

- Developed a predictive model using Python to accurately forecast the likelihood of heart disease based on patient data, leveraging libraries such as Pandas, NumPy, and Scikit-learn.
- Applied various machine learning algorithms including Logistic Regression, Decision Trees, and Random Forests, and evaluated their performance to select the best model.

E-Commerce Website | *React.js, Node.js, Express.js, MongoDB*

September 2023

- Developed a full-stack E-Commerce website using React.js for the front end, Express.js and Node.js for the back end, and MongoDB for the database, ensuring a seamless and responsive user experience.
- Utilized a modern tech stack by integrating React.js for dynamic and interactive front-end development, and Express.js with Node.js for a robust and scalable back-end, ensuring seamless communication between client and server.

Car Sales Dashboard | *Microsoft PowerBI*

August 2024

- Developed an interactive, visually compelling dashboard to analyze and report on car sales performance. Analyzed total revenue figures by year and region, offering a clear picture of revenue contributions across different geographies.

Technical Skills

Languages: Python, HTML/CSS, JavaScript, SQL

Database: MongoDB

Technologies: Machine Learning, Azure Spark, Natural Language Processing, Deep Learning, Azure Data Factory.

Libraries & Frameworks: Scikit learn, NLTK, Keras, Numpy, Pandas, React.js, Node.js, Express.js

Data Visualization: Tableau, PowerBI, Excel

Algorithms: Linear & Logistic Regression, KNN, Random Forest, Decision Tree

Skills: Exploratory Data Analysis, Data Preprocessing, Clustering Techniques.

Certifications

WIPRO TalentNext Java Full Stack | *HTML CSS, Javascript, Java, MogoDB*
